

# Forecast future performance with *Performance Forecasting*

Districts are increasingly looking to their benchmark tests to provide insight into future performance on their state summative test.

Schoolnet's new forecasting model generates predictive scores for assessments administered through Schoolnet's Assess. Schoolnet can also import predictive scores from third-party assessment platforms.

With Schoolnet Performance Forecasting you can:

- Use locally developed assessments to generate performance forecasts without the expense of third party commercially developed assessments and disparate assessment engines
- Calibrate test items for forecasting by correlating student performance on benchmark items with their historical performance on standardized tests
- Use any test to forecast future performance on a defined standardized test with a new district-level test category for forecasting
- View forecast data throughout the Schoolnet Suite

Pre-Formatted Reports: Benchmark Test - Standards Analysis by School Enrollment
