

# Service Overview™

End-to-end strategic services to help effectively bring data, information and knowledge together.

Schoolnet's end-to-end strategic services enable you to drive instructional excellence and improve administrative efficiency by making the best use of Schoolnet's Instructional Management Suite (IMS).

From assessment and planning through implementation, adoption and continued professional development, Schoolnet provides you with the means to involve and inform all district constituents – creating a powerful, integrated network of people, tools and technology that accelerates district-wide achievement with maximum ROI.

## Your Partner, Every Step of the Way

At Schoolnet, partnership is not just a platitude. It is part and parcel of everything we do, and it manifests itself in the fact that we assign a unique Client Partner to each major district we serve – your own Schoolnet champion and advocate to make sure we exceed your expectations.

Schoolnet's IMS, when combined with the unique level of service we provide, gives you the technology, the processes, the people, the passion and support that produce an incredible net effect. Achievement accelerated.

## Implementation Services:

Schoolnet has successfully implemented IMS projects for more than 30 large and mid-sized districts. The key to implementation is Schoolnet's proven five-step process: **Discover > Plan > Build > Qualify > Deploy**. This process includes a detailed Roadmap Evaluation to assess your specific needs.

With responsive service and precise attention to detail, Schoolnet configures its solution to your district's technology readiness and goals, bringing the IMS to your district efficiently and in a rigorously managed manner.

## Academic/Adoption Services:

Schoolnet provides extensive, customizable services to help you accelerate adoption and drive effective usage of your IMS.

- m **Consulting Services:** Schoolnet provides a wide range of consultative services for our district partners. While needs vary from district to district, our consulting goal is the same – to increase the readiness of your district to take full advantage of the IMS
- m **Professional Development:** Schoolnet's Professional Development programs are customized to each district's unique needs, which are identified through a collaborative planning process. Using information gained through this process, SchoolNet builds an implementation and professional development plan that carefully expands on the district's current skill and knowledge base
- m **Communications Programs:** An IMS requires important changes to the processes of teaching and learning at the district and local levels...changes that are facilitated by an ongoing, district-wide communications program. Helping you manage change...communicate the value of data-driven decision making instruction...and providing the tools and support to propagate this newfound power are all part of what Schoolnet can provide

## Application Hosting Services:

For districts that prefer not to host their Schoolnet Web-based IMS, we have designed a best-of-breed hosting solution comprised of leading systems, networking and services vendors

*“Providing the appropriate professional development to teachers, principals and administrators was a key factor in the successful rollout and adoption of the system.”*

– Patricia Renzulli, CIO  
School District of Philadelphia
